# Digital Retrofit - Why to go with us?

- **Smart efficiency:** We do not modify every single machine in the production environment
- **Intelligent communication:** We let the machine speak their "language" or we enable it to communicate
- **Smart platform:** The harmonization and connectivity of the machine happens in our business integration cluster **edbic**

The main difference in our approach is our **stable complexity** as it doesn't increase with the number of machines!

Other providers

Growing complexity with numbers of machines
